

Robinson Construction Co.'s jobsite on Nimitz Highway

Pacific Pump and Power is supplying all of the pumping needs on Robinson Construction Co.'s jobsite on Nimitz Highway. During the process of construction, they have had various dewatering and fluid transfer requirements. Robinson Construction Co. is currently using two 12" DPC300 Godwin Dri-Prime diesel pumps which are capable of up to 14,400,000 gallons per day to bypass the storm culvert which passes through the property.

Robinson Construction Co. is also dewatering the new storm culvert that they are installing. For this, they are running a 6" CD150M Critically Silenced pump capable of up to 2,880,000 gallons per day. This water is being discharged into a dewatering pit 150' away.

This dewatering pit is an open pit approximately 100' wide x 200' long x 8' deep. The pit is able to dissipate the water back into the ground system fast enough so they can pump continually.

Pacific Pump and Power has also assisted Robinson Construction Co. with PPP Personnel Operated Honda Gas Trash pumps. These are used to dewater when they are making vital connections and require the area to remain dry.
