

Pump Troubleshooting and Service Guides

Pump Troubleshooting and Service Guides are put on our rental pumps for quick access to important information about running Godwin Dri-Prime Pump Systems. This information is available on our website, www.pacificpumpandpower.com, and we also have hard, plastic copies professionally printed. If you would like to purchase a set of the professionally printed copies, please contact us at (808) 672-8198. A brief summary of the points on each card is below.

- **Safety Considerations**

This instruction card, consisting of nine Do's and six Don'ts, provides guidelines for safe operation of Godwin Dri-Prime pump systems.

- **Operating Instructions**

This card includes the Pre-Startup Equipment Checklist, seven Equipment Startup Points, and three Equipment Shut-Down Points.

- **Simplified Troubleshooting**

Should the Godwin Dri-Prime pump fail to prime, several simple checks can be made to isolate the problem. Tools required for trouble shooting include: crescent wrench and long handled screw driver or pry bar. This card includes six of the most common problems you might come across when operating Godwin Dri-Prime pump systems.

- **Routine Servicing**

Pumps, generators and light towers should be serviced every 250 hours of run time. We recommend that the date and total hours at servicing be written on the engine oil filter at each interval. This card details how to service the engine, pump end and air compressor and how to complete a vacuum pad test.
