South Kohala Water Corporation Pumps for the Mauna Kea Resort

Wastewater is a forgotten industry by many people but it is one of the most critical and essential industries there is. People's lives can be inconvenienced by interruptions in power, water, and even natural gas but there can be no interruptions to wastewater. Wastewater has to keep going regardless, because people always have to "produce their business". In the wastewater trade, there is never an option to delay or suspend their services, it is a 24/7 job! South Kohala Water Corporation takes this to heart and ensures no interruption in the wastewater for the Mauna Kea Resort. They do this with Dri-Prime portable backups installed at both of their pump stations, and in addition, they have trailered backup pumps as reliever pumps.

South Kohala Water Corporation owns three 6" HL150M Godwin Dri-Prime diesel pumps and one 3" HL80M Godwin Dri-Prime diesel pump. All of these pumps are designed for high pressure pumping because sewage is being transported from the bottom of the resort, to a half way pump station, then to a Wastewater treatment plant up the mountain. Both sewer lift stations have portable pumps mounted above the wet wells, plumbed in with auto float switches that are capable to turn on the pump instantly in the event of an emergency. These self-sufficient backups are not dependent on an external power supply and start up automatically with no human involvement in the event of a problem with the primary pumps or power supply. Dexter and his team are role models for the wastewater industry and if others follow their example it will almost eliminate sewer spills in the islands. Great work South Kohala Water Corporation!
