Turn Key Bypassing

Pacific Pump & Power does bypasses of all shapes and sizes. The one in these photos is to bypass a sewer pump station on Oahu that has particularly high total dynamic head.

In order to achieve the duty point, Pacific Pump & Power had to set up the bypass with 4" HL80M Critically Silenced high pressure bypass pumps on fully automated float controls. The contractor had PPP do the setup, wet well cleaning and 24/7 pump watch while the bypass was in operation.

Additional work is required on this station than initially planned so we are looking forward to getting back out there next month with the same equipment to work with this excellent team.

If you need assistance with sewer bypasses, compressed air, pumps, power, HDPE fusion, pipe plugs, service or operations, please call us at 808-672-8198 or email us at Sales@hawaiiipumps.com
