Large Sewer Bypass on Oahu!

Throughout 2019 and the first half of 2020, Pacific Pump & Power's pumps and piping bypassed the second largest waste water pump station in the Hawaiian Islands. We consistently bypassed approximately 10 million gallons per day but had to be ready to bypass a peak of 30 million gallons per day!

Pacific Pump & Power used our Tracstar fusion machines to put this very complicated piping system together along with our McElroy certified fusion technicians and a lot of planning! It may look like a maze but every pipes' placement was carefully thought out and critical!

Not only did this bypass run continuously for ~16 months, but it also had to be monitored 24/7 for the entire duration! To keep costs as low as possible, the client utilized our electric dri-prime pumps as primary pumps and kept the diesel units as lag and backup.

If you need assistance with sewer bypasses, compressed air, pumps, power, HDPE fusion, pipe plugs, service or operations, please call us at 808-672-8198 or email us at Sales@hawaiiumps.com
