Bypassing Effluent

During May and June, Pacific Pump & Power bypassed a critical WWTP's effluent discharge. This bypass was equipped to pump 30 million gallons per day of effluent plus around 1 million gallons per day of reused water. This bypass was set up with pressure transducers on the recycled water side and float switches on the effluent side to make the system automated. HDPE fused piping was installed on both the suction and discharge sides of the bypass system to make it 100% leak free. With a bypass this size, the contractor did not take any chances and utilized 24/7 pump watch, covered by PPP's experienced team with a shift of their own personnel during business hours.

If you need assistance with sewer bypasses, compressed air, pumps, power, HDPE fusion, pipe plugs, service or operations, please call us at 808-672-8198 or email us at Sales@hawaiiipumps.com
