Moving Water Up the Hill!

Pacific Pump & Power has a project going on right now where we are moving water from a lined pond, about a mile up the hill into a large storage tank. This project has a couple unique challenges. First, the flow and head required us to bring in three 12" x 10" Godwin HL250M from Xylem's mainland rental fleet. Although our fleet is extensive, there are times where it is very nice to fall back on the largest rental fleet in North America! Second, the pumps needed to be controlled by the level in the tank we are pumping to a mile away, while maintaining a minimum water level in the basin. For these challenges, we custom build remote float setups with long range transmitters and multiple float sets to control the pumps wirelessly.

If you need assistance with bypassing, joint testing, HDPE or PVC pipe fusion, dewatering, generators, compressed air, dredging, pumps, pipe plugs, service or operations, please call us at 808-672-8198 or email us at Sales@hawaiiipumps.com.
