High Lift Bypassing in Maui

Pacific Pump & Power worked with a general contractor in Maui to bypass a pump station that required about 200 feet of total dynamic head at only about 200 GPM. This is not an ordinary duty point but we were able to take care of it with a couple of Godwin HL80M Critically Silenced Dri-Prime pumps, one as primary and one as backup.

These pumps moved the sewage from the pump station down by the ocean, through a force main many miles long, up a big hill, to where it is able to gravity flow to the WWTP.

If you need assistance with sewer bypassing, joint testing, HDPE or PVC pipe fusion, de-watering, generators, compressed air, dredging, pumps, pipe plugs, service or operations, please call us at 808-672-8198 or email us at Sales@hawaiiumps.com.
